# Screenshot Verification Report

**Please read first.** This report is a screening aid, not an expert opinion. It does not declare a screenshot genuine or fake. It lists points that should be verified on the original device.

| | |
|---|---|
| FILE NAME | IMG-20260525-WA0078.jpg |
| CASE ID | d4b96e341964 |
| REPORT GENERATED | 2026-10-19 13:16:25 |
| AUTOMATED RESULT | 1 point to verify |

## 1. Summary

| 0 | 0 | 1 |
|---|---|---|
| High risk | Medium risk | Low risk |

The automated checks raised no high or medium risk points. 1 low-risk observation was noted for information (Section 3). This does not confirm that the screenshot is authentic. It only means the automated checks found nothing strongly suspicious. Verification on the original device is still recommended.

## 2. File fingerprint (SHA-256)

A SHA-256 value is a digital fingerprint of the file. If even one pixel of the file changes, the fingerprint changes completely. It was recorded when the file was uploaded, so anyone can later check that the file has not been altered.

SHA-256

**d4b96e34196455a265f6353a77d622315c01853396a21cda17d15a238fd03a63**

**How to re-check:** run one of these on the same file and compare the result with the value above.

```
Windows: certutil -hashfile "IMG-20260525-WA0078.jpg" SHA256
Linux / macOS: sha256sum "IMG-20260525-WA0078.jpg"
```

## 3. Points to verify first

| LOW RISK | Metadata |
|---|---|
| WHAT WAS FOUND | No EXIF/XMP found. Forwarding strips metadata, so this is neutral. |
| WHAT THIS MEANS | Photos normally carry hidden details such as camera model and capture time. WhatsApp and most chat apps remove these details when an image is forwarded, so missing metadata is common and is not, by itself, a sign of editing. |
| WHAT TO DO NEXT | Request the original file if available. |
| LINKED TO | EXIF |

## 4. Chain of custody

| TIME | EVENT | WHAT HAPPENED |
|---|---|---|
| 2026-10-19 13:16:19 | **Screenshot received and sealed** | File "IMG-20260525-WA0078.jpg" was received. Its SHA-256 fingerprint was recorded so that any later change to the file can be detected. |
| 2026-10-19 13:16:25 | **Automated analysis completed** | 1 point was flagged for verification. |

Times are as recorded by the system running Pramaan Lens.

## 5. Limitations

This report is produced by automated checks and should be read with care.

- It does not declare any screenshot genuine or fake.
- A screenshot can only be confirmed by checking the original chat on the original device.
- Low-risk points are shown for transparency and are often normal for forwarded images.
- The expert section below is intentionally blank and must be completed by a qualified expert.

## 6. Draft certificate for expert review

**Draft for expert review:** Bharatiya Sakshya Adhiniyam (BSA) 2023, section 63(4).

### Part A - Hash details

| | |
|---|---|
| HASH ALGORITHM | SHA-256 |
| HASH VALUE | d4b96e34196455a265f6353a77d622315c01853396a21cda17d15a238fd03a63 |
| FILE NAME | IMG-20260525-WA0078.jpg |
| CASE ID | d4b96e341964 |

### Part B - To be completed and signed by a qualified expert

| | |
|---|---|
| NAME OF EXPERT | |
| QUALIFICATION AND DESIGNATION | |
| ORGANISATION | |
| EXPERT'S OBSERVATIONS | |
| PLACE AND DATE | |
| SIGNATURE AND SEAL | |
